

# Infiltrator Systems Chambers

## Available from **Ron Evans Enterprises**

**Infiltrator Systems** offer products that address the unique soil conditions of southeastern Ohio. The **Quick4 Equalizer 36** was designed for use in areas normally requiring 36" wide trenches. The **Quick4 Equalizer 24 Low Profile (LP)**...known as "The Buckeye" ...was designed to meet the shallow trench requirements that are so prevalent in Ohio's soils. These are but two from the Infiltrator family of chambers that have revolutionized the wastewater leaching industry...gravel and leach pipe are becoming obsolete.

### **The Quick4 Equalizer 24 Low Profile Chamber offers these unique features:**

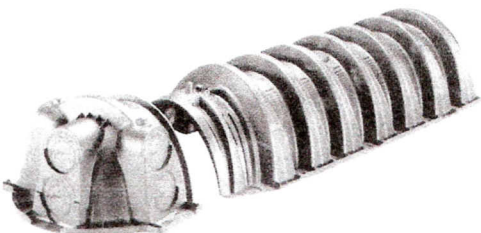

- Approved by O.D.H. for use where 24' wide trenches with pipe and gravel are specified.
- 4' length allows more flexibility with installation...easy to handle & install.
- Advanced connections swivel 15 degrees right or left for simple contoured installation.
- Ideal for all leach-field applications...curved or straight.
- Exceptional strength when used in trench or bed applications.
- 8" chamber height allows shallow installations with as little as 4" of cover.
- Compact nesting allows for easy, storage, shipping and handling.

*Quick4 Equalizer 24 Low Profile Chamber*

### **The Quick4 Equalizer 36 Chamber:**

- Use where 36" trenches with gravel and pipe would normally be used.
- Four foot chambers are easy to store, handle & install.
- Advanced contouring connectors swivel 15 degrees, right or left, for easy curved installation.
- Supports 16,000 pound axle weight with only 12" cover.
- MultiPort End Cap allows multiple piping options and eliminates pipe fittings.
